Dairy Statistics 2002-2003

Contents

1. Introduction	4
2. National dairy statistics	5
A. Industry statistics	5
i) Production	5
ii) Population	5
B. Farm production statistics	7
i) Production per cow	8
ii) Herd size distribution	9
3. Regional dairy statistics	10
4. Herd improvement	16
A. Use of herd testing	16
B. Herd test averages	18
i) Season averages	19
ii) Monthly averages	21
iii) Breed averages	22
C. Artificial Breeding (AB) statistics	24
D. Animal evaluation	27
5. General statistics	33
A. Prices received by dairy farmers	33
i) Milksolids	33
ii) Dairy farm land sale values	35
B. Breed breakdown	37
C. Planned start of calving and median calving dates	38
D. Operating structures	39
6. Disease control	42
A. Enzootic Bovine Leucosis (EBL) eradication scheme	42
B. Tuberculosis (Tb) control	43
Appendix 1: Farming regions and districts	44

List of tables

2.1	Summary of milk production statistics since 1998/99	5
2.2	Summary of herd statistics since 1974/75	6
2.3	Summary of farm production since 1974/75	7
2.4	Average production per cow by herd size in 2002/03	9
3.1	Herd analysis by region in 2002/03	11
3.2	Farm production analysis by region in 2002/03	12
3.3	Herd analysis by district in 2002/03	13
3.4	Farm production analysis by district in 2002/03	14
4.1	Use of herd testing by region in 2002/03	16
4.2	Trend in the use of herd testing services since 1955/56	17
4.3	Season herd test averages per cow by region in 2002/03	19
4.4	Trend in the national herd test averages since 1970/71	20
4.5	Monthly herd test averages by region in 2002/03	21
4.6	Herd test breed averages by age of cow in 2002/03	22
4.7	Liveweight by age and breed of cow in 2002/03	23
4.8	Trend in Artificial Breeding use for the last 9 seasons by region: cows and yearlings to AB	24
4.9	Economic values used from 17 May 2003	27
4.10	Average Breeding Values and Breeding Worth of 1998 born bulls	27
4.11	Number of sires by birth year and breed	28
4.12	Herd Breeding Worth in 2002/03	29
4.13	Herd Production Worth in 2002/03	29
4.14	Cow Breeding Worth in 2002/03	30
4.15	Cow Production Worth in 2002/03	30
4.16	Average Breeding Worth and Breeding Value of all cows by breed born in 2000	32
4.17	Survivability percentages since 1996/97	32
5.1	Trend in prices received for milksolids since 1973/74	34
5.2	Trend in dairy land sale values for the last 20 years	35
5.3	Herd analysis by operating structure in 2002/03	40
5.4	Farm production analysis by operating structure in 2002/03	40
5.5	Trend in the percentage of herds in each operating structure for the last 10 seasons	41
5.6	Trend in the number of herds in each operating structure for the last 10 seasons	41
6.1	EBL status for dairy herds (June 2003)	42
6.2	Tuberculosis (Tb) testing and results in 2002/03	43

List of graphs

2.1	Trend in the number of herds and average herd size since 1974/75	5
2.2	Trend in milksolids production per cow since 1992/93	8
2.3	Distribution of herds by milksolids production per cow in 2002/03	8
2.4	Herd size distribution for the last three seasons	9
3.1	Regional distribution of dairy herds in 2002/03	10
4.1	Trend in the percentage of herds testing since 1966/67	18
4.2	Average milkfat and protein production per cow in 2002/03	19
4.3	Liveweight by age and breed of cow in 2002/03	23
4.4	Trend in the percentage of cows to Artificial Breeding since 1974/75	24
4.5	Average number of inseminations per cow since 1986/87	25
4.6	Ayrshire semen usage (%) by cow breed for the last five seasons	25
4.7	Crossbreed semen usage (%) by cow breed since 2000/01	25
4.8	Jersey semen usage (%) by cow breed for the last five seasons	26
4.9	Holstein-Friesian semen usage (%) by cow breed for the last five seasons	26
4.10	Trend in the percentage of inseminations of each major breed for the last 40 seasons	26
4.11	Genetic trend of proven dairy bulls by year of birth	28
4.12	Distribution of herd Breeding Worth in 2002/03	29
4.13	Distribution of herd Production Worth in 2002/03	29
4.14	Distribution of cow Breeding Worth in 2002/03	30
4.15	Distribution of cow Production Worth in 2002/03	30
4.16	Genetic trend in Breeding Worth for all cows in 2002/03	31
4.17	Trend in Production Worth for all cows in 2002/03	31
5.1	Trend in milksolids payout to dairy farmers since 1973/74	35
5.2	Trend in dairy land values (price per hectare) for the last 20 years	36
5.3	Breed percentages of cows in each region in 2002/03	37
5.4	Planned start of calving dates for mixed age cows by region	38
5.5	Median calving dates for mixed age cows by region	38
6.1	The number of EBL positive herds is declining rapidly	42

1. Introduction

As of March 2002, Livestock Improvement Corporation Limited became a user-owned co-operative, with responsibility for farm production activities and, in particular, dairy herd improvement and herd records. Livestock Improvement aims to “lead the world with genetics and knowledge to create wealth for pastoral dairy farmers”.

Livestock Improvement's activities can broadly be described as genetics, information and advice. Services provided to farmers include farm management information, herd testing and artificial breeding services, DNA analysis, a farm advisory service, research to improve farm profitability, statistical information related to the New Zealand dairy industry, and herd recording on the Livestock Improvement Database.

Dairy Statistics 2002/03 contains many of the dairy industry statistics that were released until 1983/84 in the *New Zealand Dairy Board Farm Production Report*. In 1984/85, with the formation of the Livestock Improvement Division, the report was renamed the *Livestock Improvement Report*. In 1987/88 it was titled *Annual Report (Livestock Improvement Division)* and, with the establishment of the Livestock Improvement Corporation Limited in 1988, the report is now released under the title *Dairy Statistics*.

Source data used for the publication has altered over time. The statistics presented in *Dairy Statistics* from 1992/93 were obtained from dairy companies and from information stored on the Livestock Improvement Database. Prior to 1991/92, the information for the *Dairy Statistics* publications was obtained primarily from the analysis of the New Zealand Dairy Industry Cow Census (an annual survey of all dairy farmers) last conducted for the 1990/91 season. The 1991/92 edition of *Dairy Statistics* was a transition year for which only minimal data was available.

In the Herd Improvement section of *Dairy Statistics* there is an important difference to the data presented in *Dairy Statistics* before 1995/96. Since the implementation of Animal Evaluation in June 1996, statistics for 1995/96 onward include bull and cow genetic trends.
